

# Removable Toilet Support Arm

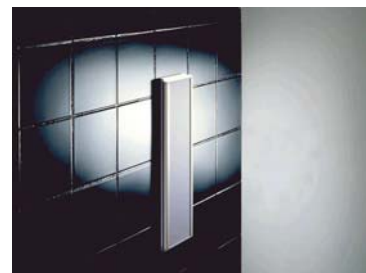

Look no further than our Pressalit Care track system when you need the most cost effective way to provide support around the toilet.

Simply install the 40cm vertical wall track model number R9900 into the bathroom, and then when required, you can add the height adjustable folding support arm model number R9308.

The track offers the flexibility to incorporate support arms when and where they are actually required in a facility, whilst assisting in keeping bathrooms functional and minimalist in their appearance.

With 25 cm worth of vertical height adjustability with the lockable support arm, you can be assured that almost every patient scenario can be met.

There are several colour options for the support arm, including strong primary tones for dementia and visually impaired users.
