

Shampoo Basin

Shampoo Basin – Adjustable Height

Our wall mounted, height adjustable shampoo basin package allows for frequent vertical movement when dealing with mixed user requirements. Up and down movement of the basin is attained with minimal effort, as the bracket uses a counterbalanced method of adjustment, operated via a simple lever operated hand control.

Having the means to easily alter the basin height vertically, over a 350mm range, makes the hairdressers working environment that much more comfortable, eliminating OH&S issues such as back injury.

The CD631 package includes all of the following:

- Pressalit Care counterbalanced basin bracket
- Dedicated shampoo basin suitable for front and back washing
- 65mm lever hot and cold wall mounted tapware
- Trigger activated hand spray with 1500mm hose
- Wall mount for hand spray

Product Code

CD631

Height adjustable shampoo basin package

Easy-to-use lever action tapware

- Ergonomic trigger activated shampoo spray with 1500mm hose
- Shampoo spray mounts on basin, supplied with optional wall mounted bracket
- WELS 3 Star (7.7lpm) water efficiency rating supplied standard, options available

Basin shown here in high position

- Bracket allows the height of the wash basin to be adjusted by up to 350mm
- Installation instructions include recommended height of both basin bracket and associated tapware

A built in counter balance mechanism off-sets the basin weight

- Using the lever control, the wash basin becomes almost 'weightless' and can be moved up or down with minimal hand pressure
- The lever control is mounted on the end of a fixed rail which can provide support and function as a towel rail
- Position for the lever control can be either on the right or left hand side of the basin

The adjustable height mounting bracket is also available for standard hand washing basins. Please contact Caredesign for more information.
